

BACK TO SCHOOL

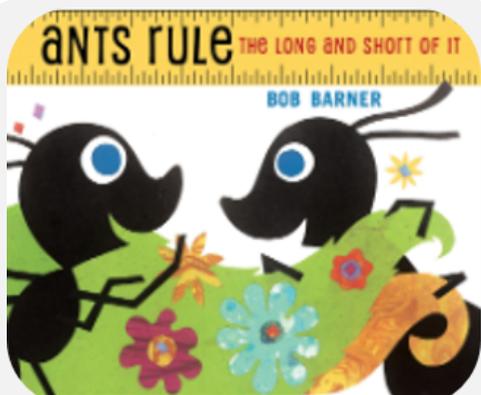

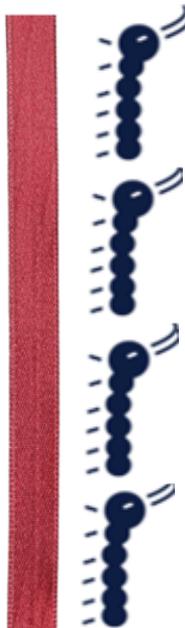

Use uniform informal units to create a path or tower to measure objects.

Towers
(height)

How many blocks are needed to make a tower as high as the paintbrush?

A group of ants, plan to build a carnival ride.
How will different sized bugs fit in the carriages?

Find more details on this and other Measurement lesson ideas in the free Maths in Schools F - 2 online course.

Paths and towers

Early years : Measurement

Students build paths to compare and measure length and towers to compare and measure height.

Paths
(length)

How many blocks long is the cricket bat?

Pose questions

- What did you find out when you measured each object?
- What did you notice about the different lengths of each object?
- What are the words used to describe length?
- How do you work out which is the longest or shortest?
